

Hubert Kuc

E-mail: hubertkuc@gmail.com

Phone: (+48) 503-172-691

Senior engineer with over 10 years development experience across the software lifecycle, from concept and design through to development and testing. Technical experience includes embedded systems, application GUI, micro services, machine learning and computer vision, DevOps.

Education

Pg. Resources Management in IT – Warsaw University of Technology, 2015

PhD Experimental Nuclear Physics – Universite Paris Sud XI, 2014

MSc Technical Nuclear Physics – AGH Krakow University of Science & Technology, 2009

Experience

08.2024 – 01.2026- Goldman Sachs

Senior Software engineer in core engineering – Migration of multiple legacy C++ and Java codebases to a unified build and CI ecosystem based on Bazel, Maven and GitLab CI. Standardized build pipelines and dependency management across teams, improving build reproducibility and reducing integration failures. Acted as subject matter expert for complex build, linker and runtime issues in large-scale codebases. Collaborated with core engineering teams to align tooling with long-term platform strategy.

Technology: Bazel, Maven, Bash, GDB, Valgrind, Python, Gitlab CI, C++, JAVA, DevOps.

2015 – 12.2023- Mobica Ltd.

05.2022-12.2023– Group Manager – In addition to the engineering role, I was performing line manager duties for the group of 8 engineers, such as: being focal point to the group, leading yearly appraisals, salary reviews, development plans, quarterly 1-on-1 meetings, helping to fit new projects to the engineers by matching requirements to the skills and expertise, conducting managerial interviews for the new candidates.

09.2021-12.2023– Backend Developer/Architect – Team leader in the international group of 7 engineers in different time zones. Work on a project for ABB US on the new modular software architecture for the petroleum flow computers.

Technology: Backend, C++ 17, python, CMake, libuv, UML, Google test, Google protobuf, Visual Studio Code, QEMU, Agile, Scrum master, Azure DevOps, Git.

12.2020-08.2021 – Senior software engineer in a project for Ingenico UK. Work on the development of the micro services for the cashless payments.

Technology: Ingenico SDK, microservices, C++ 11, python, Google Test, REST, SSL, SSH, Agile, Scrum, Jira, Confluence, Git.

07.2020-12.2020 – Team leader in an internal RND project on Warehouse monitoring. Studies on applications of the machine learning algorithms like SSD, YOLO for the object detection on warehouse monitoring videos in python and OpenCV.

Technology: computer vision, machine learning, YOLO, SSD, unity, Python, TensorFlow, Pandas, NumPy, Docker, Containers, Agile, Scrum Master.

04.2016-07.2020 – Senior software engineer & team lead in a projects JUICE and MetOP SG for an Airbus Defence and Space in Toulouse, France. Work on the development of the components for the central flight software. Responsible for: SRS writing, detailed design in UML, implementation and unit tests in C.

Technology: C, UML, test coverage, misra, ECSS, waterfall.

2013 – 2015 - Samsung Electronics

C++ software engineer in the STB UX/UI team in Video Displays (VD) department at Samsung Poland R&D Institute in Warsaw. System architecture based on 3 tier abstraction layers i.e. drivers, middleware and application, all running on embedded Linux OS. Responsible for design and implementation of the STB application GUI features i.e. media and PVR library, satellite signal scanning, EPG, channel list manager, etc.

Noncommercial experience:

2007 – 2013 – The HADES Collaboration – Researcher

Work as a PhD candidate within the HADES collaboration.

- Experimental data analysis - data analysis (up to 100TB) from nuclear reactions in experiments performed with [HADES spectrometer \(https://hades.gsi.de\)](https://hades.gsi.de).
- Feasibility studies of the future HADES experiments - Numerical calculations in C++ OO libraries. Implementation of the theoretical models and Monte Carlo simulations.
- HADES readout electronics upgrade - Development of new electronics system and integration with spectrometer high resolution sensors.

Computer Systems Summary:

- Languages: C++, C, UML, Python, Machine Learning
- Environments: Linux, Windows, Embedded systems
- Others: Project management

Training Courses and Certificates:

- PRINCE2 foundation certificate
- Trainings in:
 - DevOps
 - Embedded development
 - Python, Django, pandas
 - JAVA, Spring Boot, microservices
 - Machine learning, Computer vision
